
AliveCor® Labs

Introducing AliveCor Cardiac Monitoring

AliveCor now offers ambulatory cardiac monitoring, delivering professional ECG review, critical finding notifications, and comprehensive end of study reports complete with symptom-rhythm correlation.

KardiaMobile 6L

Capture rhythms other cardiac monitors miss

KardiaMobile 6L, the only wireless, patchless 6-lead ECG, provides extended cardiac monitoring for up to 30 days, improving the likelihood of detecting suspected arrhythmias. With the convenience of recording an ECG anytime, anywhere via a pocket-sized device, patients can track symptoms and triggers the moment they happen, right on their phone. AliveCor Labs collects and reviews patient ECG data, providing clinicians symptom-rhythm reports throughout the monitoring period.

KardiaPatch

Continuous monitoring up to 14 days

Lightweight and easy to wear, KardiaPatch records ECGs continuously for up to 14 days. All incoming ECGs are triple validated, beginning with deep learning technology and certified cardiographic technician examination, and ending with quality assurance review. With multiple configurations available, including adult and pediatric, KardiaPatch delivers data you can trust.
